EDUCATION

Modern institute of technology and research center, Rajasthan
B.TECH IN COMPUTER SCIENCE

Sep 2020 – Aug 2024 | Rajasthan

WORK EXPERIENCE

SCRUM LABS PVT LTD | SOFTWARE DEVELOPER INTERN

Remote | Jun 2025 – Nov 2025

- Developed **document view count feature**, tracking **per-user** and **total views** with efficient **database aggregation** across **high-traffic endpoints**.
- Built **document history** with **version control**, enabling users to **view, compare, and restore** previous document versions seamlessly.
- Implemented **inventory ledger module** with **version-based tracking**, supporting full **audit trails** for stock entries, adjustments, and transactions.
- Collaborated with the **product team** to ship **backend APIs** supporting core **document management** and **inventory workflow** features.

NUVANTA SOFTWARE SOLUTIONS | BACKEND DEVELOPER INTERN

Onsite | Dec 2024 – Apr 2025

- Integrated **NetSuite ERP** and **Xero** accounting as third-party services, enabling seamless data sync for invoices, payments, and financial records.
- Built REST API connectors for NetSuite and Xero, handling **OAuth flows**, webhook events, and error retries for reliable third-party communication.
- Participated in sprint planning and code reviews, shipping features and fixes on **Node.js** and **Java** back-end systems.

PROJECTS

MCP TOOL SERVER 

NODE.JS, MCP SDK, CLAUDE DESKTOP

Built a custom **MCP (Model Context Protocol)** tool server exposing structured tools that Claude Desktop can discover and invoke natively through natural language commands. Designed and registered multiple MCP tools with typed input/output schemas, enabling Claude to interact with external APIs, fetch data, and trigger backend actions seamlessly. Handled tool registration, request routing, and response formatting as per MCP protocol spec, ensuring full compatibility with Claude Desktop's tool-use flow. Tested the full end-to-end invocation pipeline including edge cases, malformed inputs, and error recovery scenarios.

E-COMMERCE BACKEND SYSTEM 

JAVA, SPRING BOOT, JPA, HIBERNATE, MYSQL, SPRING SECURITY, JWT

Designed a scalable e-commerce backend using **Spring Boot** following RESTful layered architecture (Controller-Service-Repository). Implemented User Management, Product Catalog, Cart, and Order Processing with **JWT-based authentication** and role-based access control. Exposed 15+ REST APIs for product listing, search, cart operations, and order management. Applied pagination, sorting, filtering, global exception handling, and input validation for robust error management across all endpoints.

REAL-TIME USER MATCHER 

NODE.JS, EXPRESS.JS, REDIS, SOCKET.IO, NGINX, AWS EC2, PM2

Built a real-time anonymous chat platform that efficiently pairs users using **WebSocket** connections for instant communication. Implemented a scalable queue management system using **Redis** to maintain a live pool of users, ensuring smooth and fast matching even under high traffic. Designed automatic disconnection recovery logic to detect dropped connections and seamlessly re-add users to the queue, improving reliability. Deployed on **AWS EC2** with **Nginx** as a reverse proxy and **PM2** for process management and high availability.

SKILLS

Languages: Java, JavaScript, TypeScript, SQL

Backend / Frontend: Node.js, Express.js, Spring Boot, Spring Security, React.js, HTML, CSS

Databases: MySQL, MongoDB, Redis

DevOps & Tools: Docker, Kubernetes, GitHub Actions, Nginx, AWS (EC2), Git, Postman, PM2

Core Java: OOPs, Collections Framework, Exception Handling, Multithreading
